## SUMMARY

Computer Science undergraduate (2027) with hands-on production experience building a Next.js marketing platform and a TypeScript/PostgreSQL payments API. Strong across React, Node.js, REST design, transactional SQL and automated testing. Seeking software engineering roles on full-stack or backend teams.

## EDUCATION

**Shri Shankaracharya Technical Campus, Durg, India** 2023 – 2027
*B.Tech, Computer Science & Engineering — CGPA: 8.9/10*

## EXPERIENCE

**Swaniki** — Software Development Intern 2026

- Shipped a 7-page Next.js 14 + TypeScript marketing site covering products, client websites, services, careers, about, blog and contact with reusable components and Tailwind/daisyUI.
- Modeled 5 products and 6 client websites as typed content; added sitemap/robots generation and per-page metadata so every route is search-indexable.
- Built responsive layouts with framer-motion and Embla carousel, and a careers application flow; the site is deployed on Vercel.

**Code Booster** — Web Developer Intern (Virtual) Jun – Jul 2024

- Shipped 5+ responsive client pages and a shared component library, cutting UI inconsistencies across deliverables to near zero.
- Integrated REST APIs and resolved cross-browser bugs (Chrome/Firefox/Edge), hitting 100% of sprint milestones in a Git-based agile workflow.

## PROJECTS

**PayFlow** — Payment Processing & Settlement Engine · Live · GitHub
*TypeScript, Node.js, Express, PostgreSQL, Docker, GitHub Actions, Vitest, Swagger/OpenAPI*

- Built a payment API covering idempotent creation, capture, settlement, partial/full refunds, HMAC-signed webhooks and analytics — deployed on Render with Swagger docs and an in-browser sandbox.
- Eliminated double charges and over-refunds by combining idempotency-key dedupe (unique index + race handler) with SELECT … FOR UPDATE row locks inside ACID transactions.
- Extracted settlement math (2% platform fee + 18% GST) into a pure, unit-tested service; added HMAC-SHA256 webhook delivery with tracked retries and a payment audit-trail endpoint.
- Wrote 46 unit + integration tests (Vitest, Supertest) including concurrent capture/refund races; enforced zero-warning ESLint/Prettier and CI on every push.

**Saffron & Stove** — Recipe Finder · GitHub
*React 18, Node.js, Express, MongoDB, TanStack Query, PWA*

- Built an Express proxy that keeps the third-party recipe API key server-side, with global, auth and search rate limits.
- Cut third-party API calls ~70% with TanStack Query caching and a custom debounce hook, reducing cost and latency.
- Shipped an installable offline-capable PWA with JWT httpOnly-cookie sessions; scored 89 Performance / 95 Accessibility on Lighthouse.

## TECHNICAL SKILLS

**Languages:** TypeScript, JavaScript (ES6+), C++, C, SQL
**Frontend:** React 18, Next.js 14, React Router, TanStack Query, Tailwind CSS, PWA
**Backend:** Node.js, Express, REST APIs, PostgreSQL, MongoDB, MySQL
**Correctness & Security:** ACID transactions, row locking, idempotency, HMAC webhooks, JWT, bcrypt, Helmet, rate limiting
**Testing & DevOps:** Vitest, Supertest, ESLint, Prettier, Swagger/OpenAPI, Git, GitHub Actions, Docker, Render, Vercel

## ACHIEVEMENTS

- LeetCode: 300+ problems solved across arrays, trees, graphs, dynamic programming and binary search; 100 Days Badge (2025).
- Shipped a 46-test payments API with CI/CD and a production Next.js site for Swaniki.
